

Lesson #3: Making Four Grays Appear As Three

Using four values from this array, create a study which shows how two different grays appear to be the same.

- Criteria:
1. Viewers should see how two different grays can appear to be the same as well as very different.
 2. A unique format would be welcomed here.

Lesson Color#3-: Making 4 colors appear as 3.

Using colors from the color array sheets, or an array of your own creation, create a color deception in which two different colors appear to be the same.

- Criteria:
1. Show how two colors can appear to be the same as well as very different.
 2. Design a unique array with dominant anchors.
 3. Design a unique format.

Helpful Hint: Exploit the lessons learned from the previous assignments and critique.
